Reminder, automatic actions

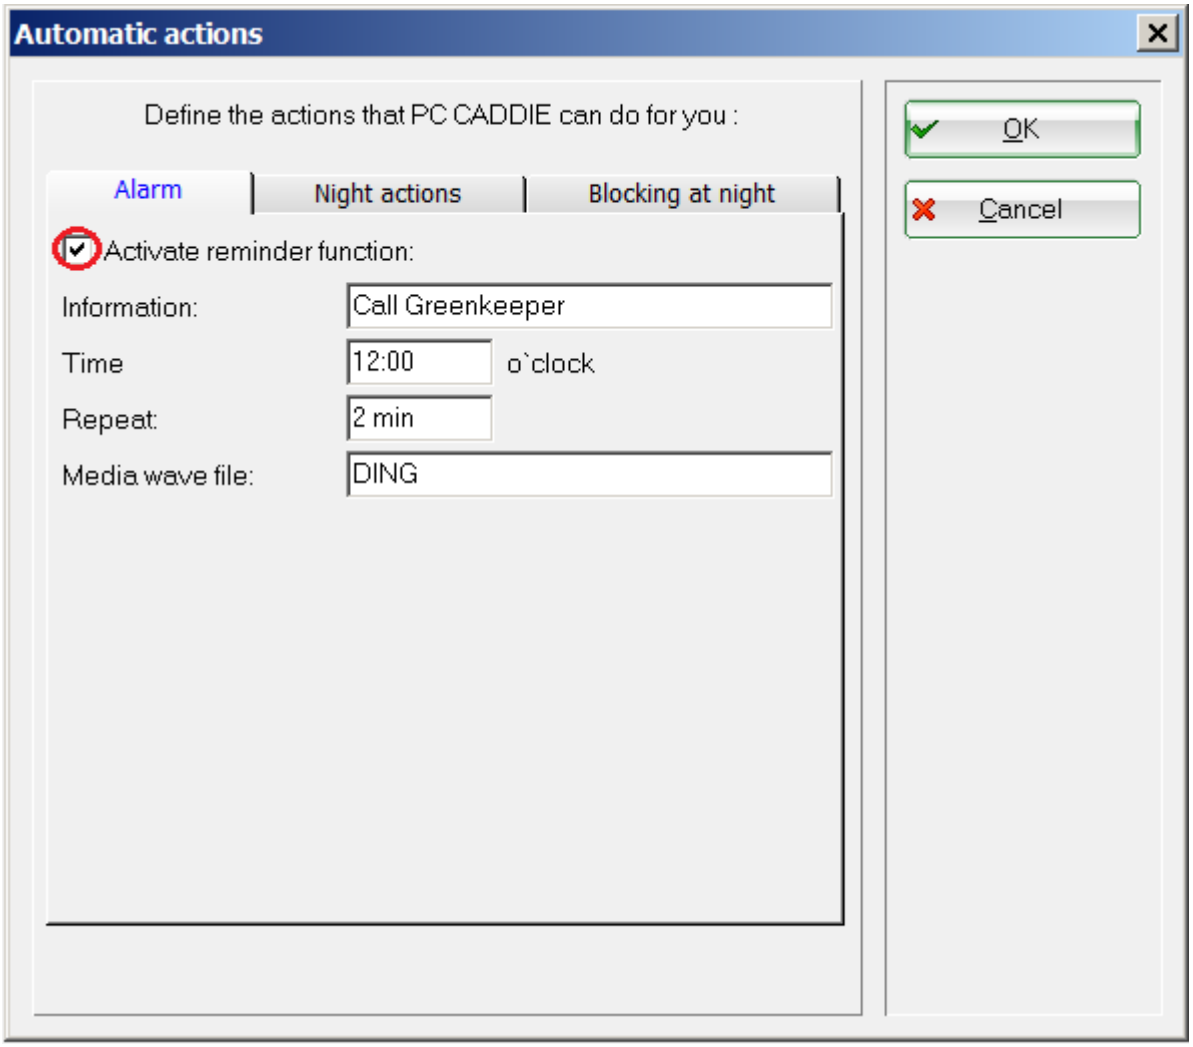

Under ***Timetable/Reminder, automatic actions*** you can set which actions PC CADDIE should perform automatically for you.

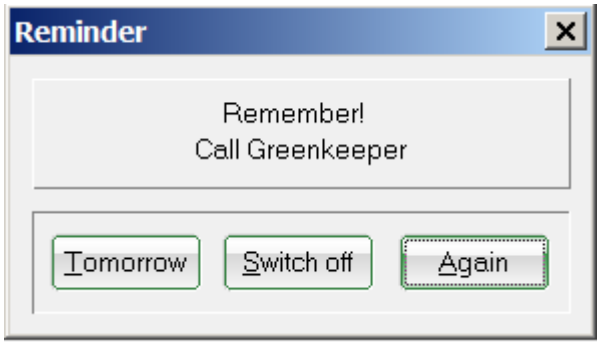

To process the tasks of the night run, a (general) PC CADDIE service should be installed.

Alarm clock

Please note that although this function is still available, it has now been replaced by the module CRM\DMS in PC CADDIE.

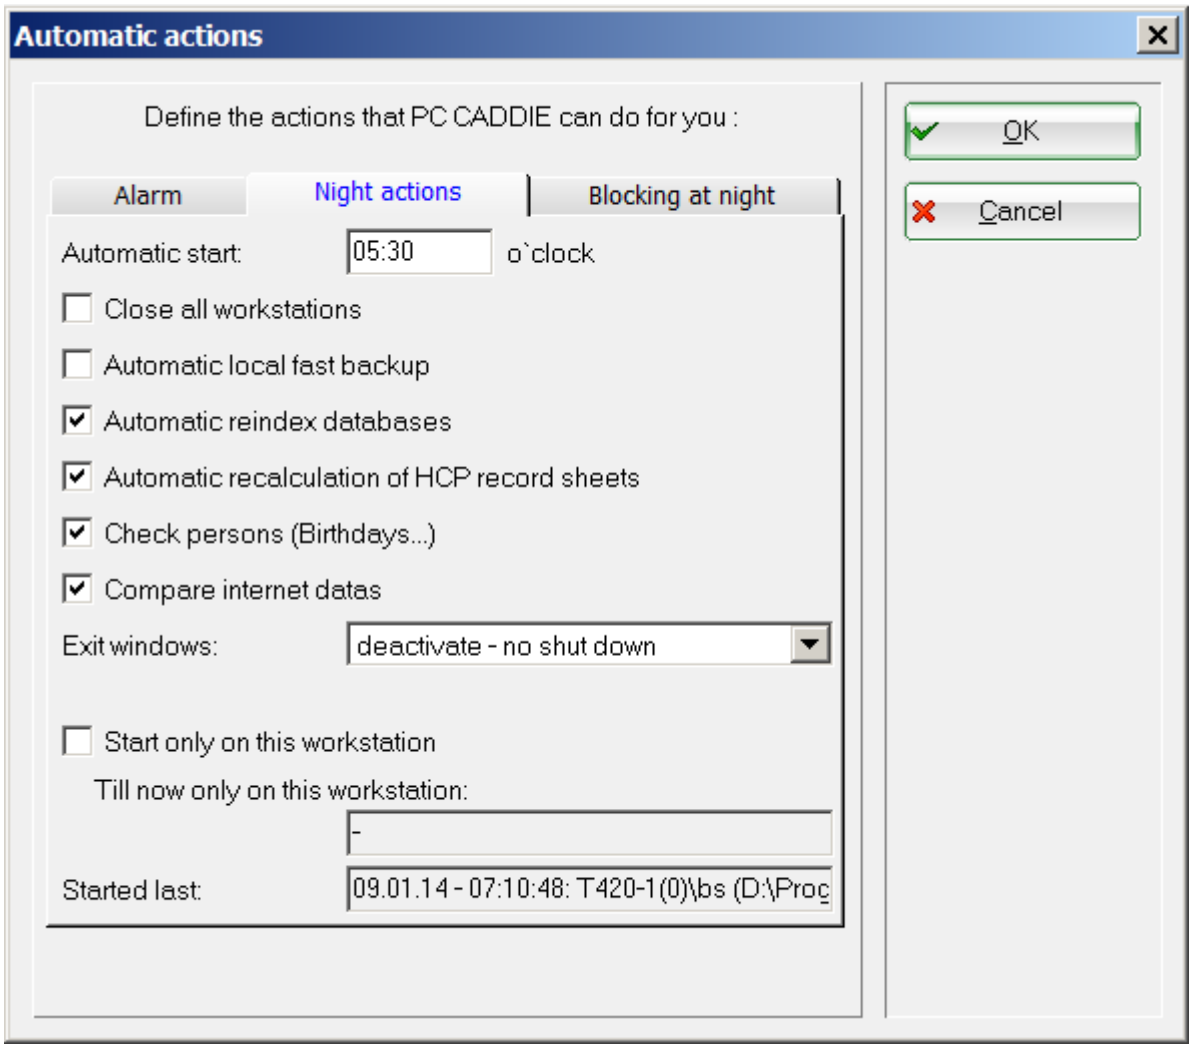

If you want PC CADDIE to warn you automatically, first activate the reminder function and then enter the information, for example „Call Greenkeeper“. You can also specify the time, the repetition rate and the type of sound. At the desired time, the following window will appear in PC CADDIE, accompanied by your selected sound:

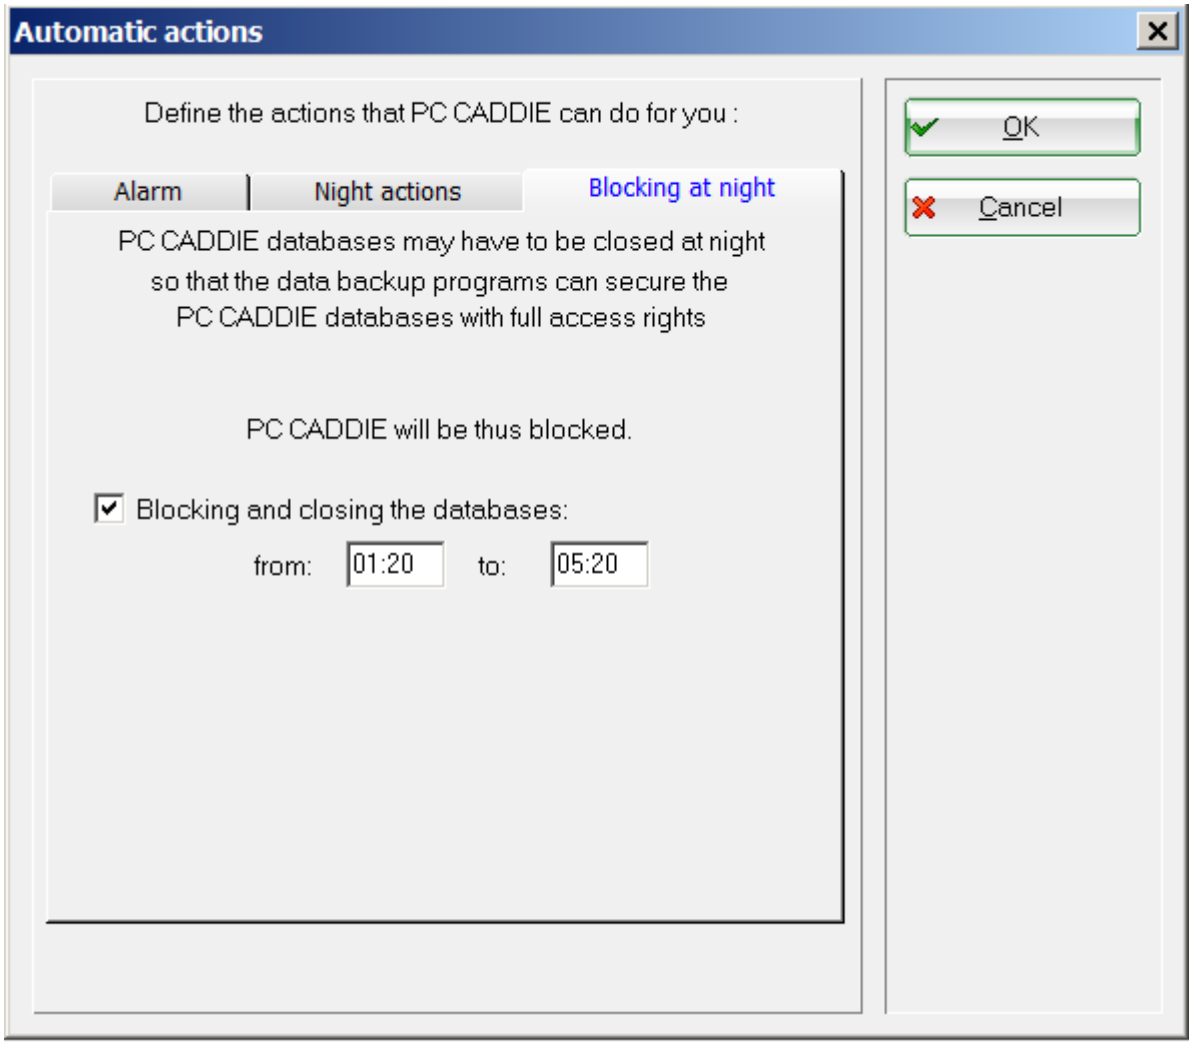

Automatic night mode

Select the options you want PC CADDIE to carry out automatically for you and the time at which PC CADDIE should start these actions:

Automatic actions
Define the actions that PC CADDIE can do for you :
OK
Cancel
Alarm
Night actions
Blocking at night
Automatic start:
05:30
o`clock
Close all workstations
Automatic local fast backup
Automatic reindex databases
Automatic recalculation of HCP record sheets
Check persons (Birthdays...)
Compare internet datas
Exit windows:
deactivate - no shut down
Start only on this workstation
Till now only on this workstation:
-
Started last:
09.01.14 - 07:10:48: T420-1(0)\bs (D:\Proc

Night block

This lock is only necessary if your IT administrator wants to back up the PC CADDIE databases with an external programme. The databases can only be backed up reliably if they are closed. Enter the time at which PC CADDIE should be locked (time of data backup).

The night lock must not overlap with the PC CADDIE night automatic.

All PC CADDIE modules cannot be used during this time (card systems, access controls, PC CADDIE services, etc.). This also means that no start times can be booked during this time. Please also note that the same blocking also applies in the PC CADDIE://online Club Manager under the menu item Teetime server (TT server).
