Handicap Record

The function **//Handicaps/Print.../Handicap Record //** is used to print several players' record sheets at once(for example, for all members). The ***Group of persons*** and the ***Order*** can be defined in the same way as all the other person print-functions. Start the printing process with the button ***Print*** (F8).

The button ***Edit*** prompts you to various setting options.

In our example the field ***From this date*** is empty and we have entered 10 ***Maximum number of lines***. This will print the latest 10 entries of a record sheet, no matter if a player has joined any tournaments or not (for example, during the last year).

The displayed account area is the same account area that has been set for the *Intranet synchronization*. So please do not change these settings unless you have a very important reason for doing this. It is recommended that you discuss any adjustments with the PC CADDIE Support team.
