PC CADDIE://online InfoScreen

The InfoScreen is a PC CADDIE://online service and is used to display various information of your choice. It is a page displayed on the Internet. The main aim is to enter the data in one place and display it in different places.

The following questions arise here first:

1. Which of the **3 expansion stages** would you like to use?
2. Should your screen be in **portrait or landscape format** be used?
3. If landscape format: Would you like the screen **in one or two columns** use?

2 expansion stages

InfoScreen Plus

The InfoScreen Plus is the entry-level model. The layout and content can be largely customised by the club itself. The club manager can be used to create playlists that display start and result lists, texts, images and videos. However, interaction with the player is not possible, it is for information purposes only.

- **Start lists** are put online and played once in a selected time frame (prerequisite: PC CADDIE://online Tournament management).
- **Result lists** replace the start list and are published accordingly (Prerequisite: PC CADDIE://online Tournament management).
- The **place allocation** shows the occupancy of the week quickly and easily (Prerequisite: PC CADDIE://online Space allocation).
- **Advertising** stimulates business. (Here you will find possible advertising space for your sponsors - for sale for refinancing.)
- **Frames** show, for example, YouTube videos (e.g. training a golf swing).
- **Pictures** often say more than a thousand words.
- About a **free text** you can easily and quickly post the tournament schedule of the current day.

InfoScreen Premium

The InfoScreen Premium also offers check-in functionalities for your customers.

Format

The screen is basically available in 2 formats.

Portrait format

The portrait format is very popular for outdoor steles.

😉 Here, golfers can spontaneously view times that have become available at short notice on an outdoor terminal.

Landscape format

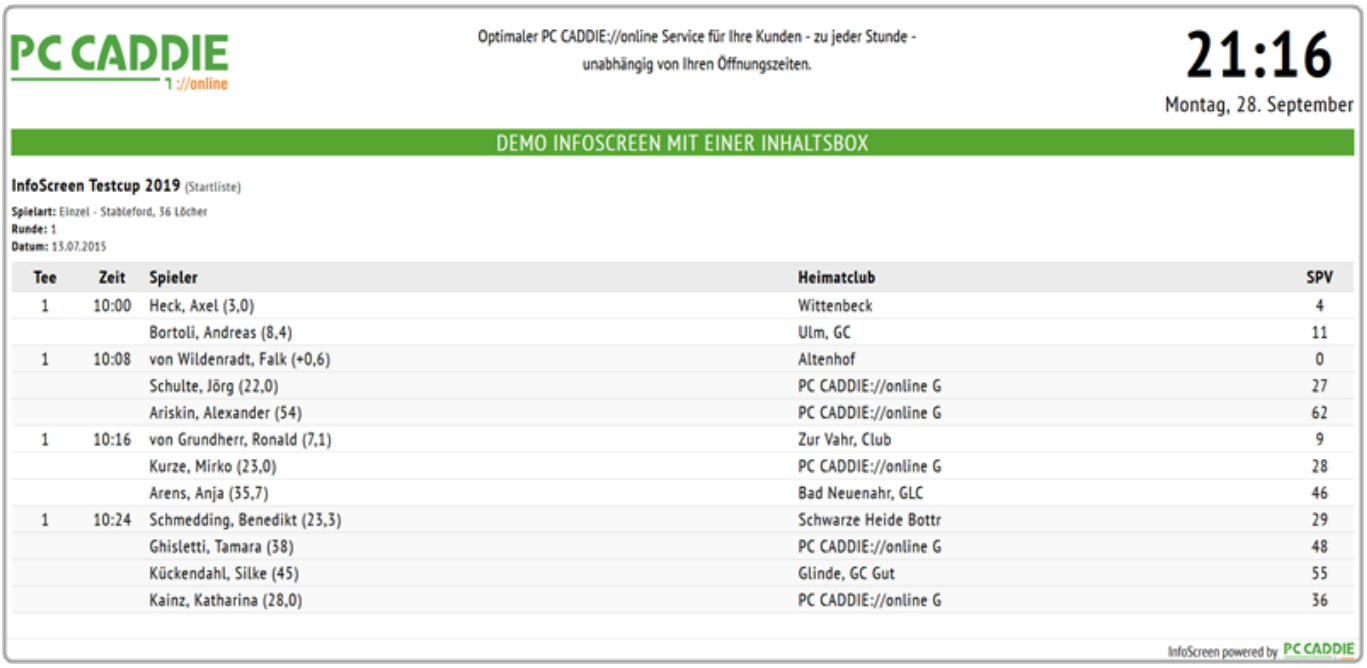

Column selection

The landscape format again offers two subdivisions.

Single column

The single-column screen is particularly suitable for smaller screens.

Here you will find an example link for an einspaltigen InfoScreen.

Two-column

The two-column screen offers more options. Different information can be played simultaneously.

Here you will find an example link for an zweispaltigen InfoScreen.

System requirements

Please note the following system requirements:

- The screen of any size must have a FullHD resolution of 1920×1080 pixels (graphics interface to the screen (VGA/DVI/HDMI)).

- The computer that controls the screen must have an HTML5-capable browser: IE 11, Google Chrome. You can purchase this ready installed from us on request, Simply contact us.
- The computer must be permanently connected to the Internet (LAN/dedicated WLAN).
- A direct connection to the local PC CADDIE system is not required, so that stable UMTS/LTE connections can also be used.
- A Teamviewer host with fixed access data should also be installed on the device - this guarantees fast help.
- The InfoScreen Premium also requires a touch-capable monitor.

Operation of the InfoScreen

Have you answered all the questions? Do you fulfil the system requirements?
