Simple evaluation of individual fields

Member statistics in practice

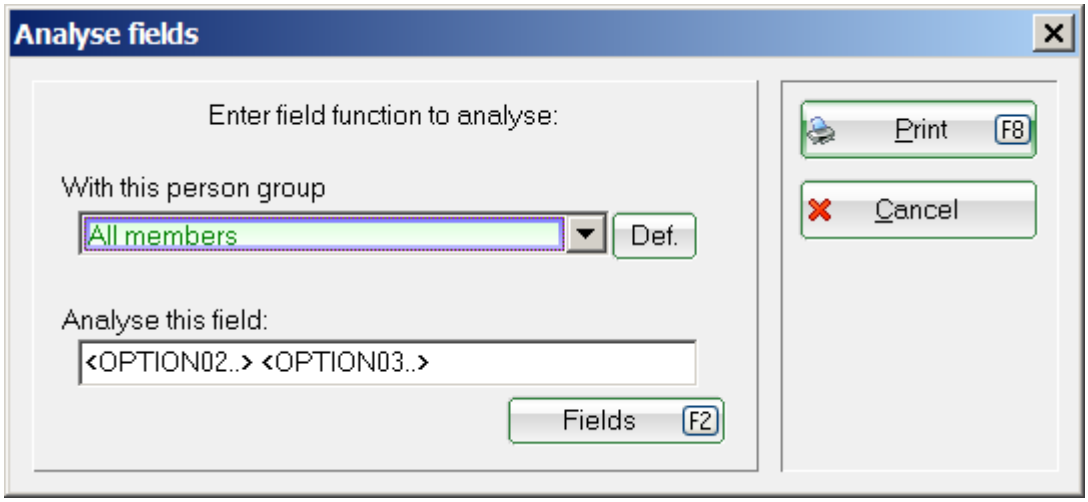

It is often asked whether the statistics for membership types can also be collected for the past. It is only possible to determine how many members there were in the past based on the date of joining and leaving. The numbers of membership types cannot be determined in this way at present. We therefore recommend that you regularly create and save membership statistics so that they are available at all times. The setting explained below is particularly important. Have the characteristic fields and combinations of membership status and contribution status counted. Save the results regularly (per year, per quarter) as a PDF and possibly also as an Excel file.

Statistics setting

Under ***Contacts/Statistics*** you will find the option ***Simple evaluation of individual fields.***

With the option ***Simple evaluation of individual fields*** option, PC CADDIE offers the possibility to quickly and easily count individual or multiple fields for a group of people. In the screenshot below, we have summarised the member characteristics <MERKMAL02.> and <MERKMAL03.> analysed to the exact number of member types in the various contribution classes:

You can see directly in the printout how many members have been counted in which combination. If you want to know what you have stored for each member, you can create a list with the following content: <NAME_OHNE_TITEL.> <MERKMAL02.> <MERKMAL03.>. Here you can recognise directly if a contribution status has been inadvertently forgotten to be selected for members.

TIP Would you just like to know how many people are hidden behind the individual membership types? Enter the following in the filter <MERKMAL02.> in the filter. You will receive a list with the exact numbers via the desired field:

Number of members by year of birth and gender

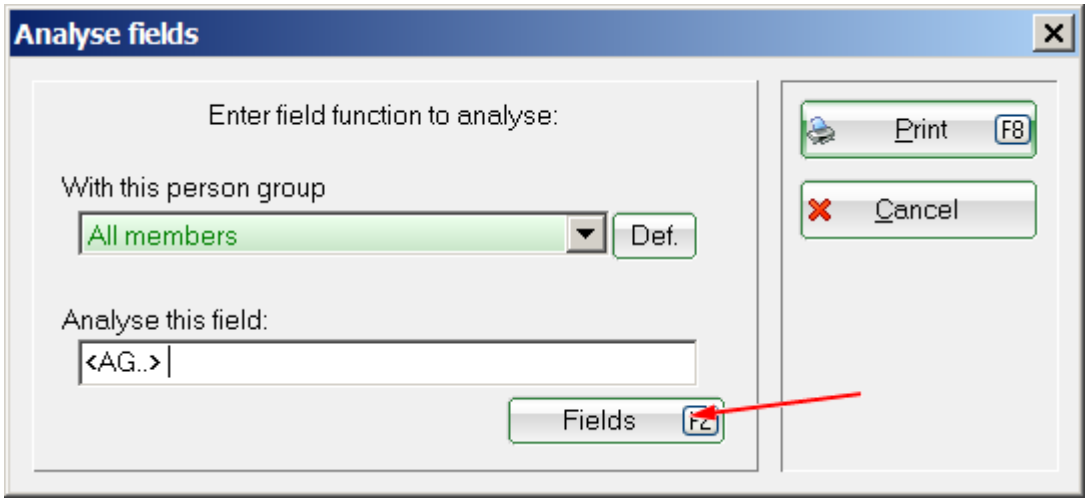

Be creative with the possibilities of PC CADDIE.
Do you need the number of members broken down by year of birth and gender? Use the simple evaluation of the fields. Take a look at the selection:

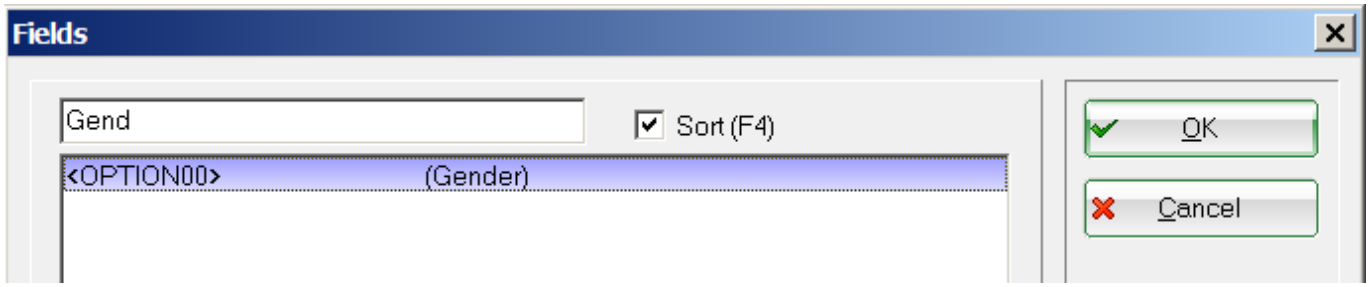

Select the vintage:

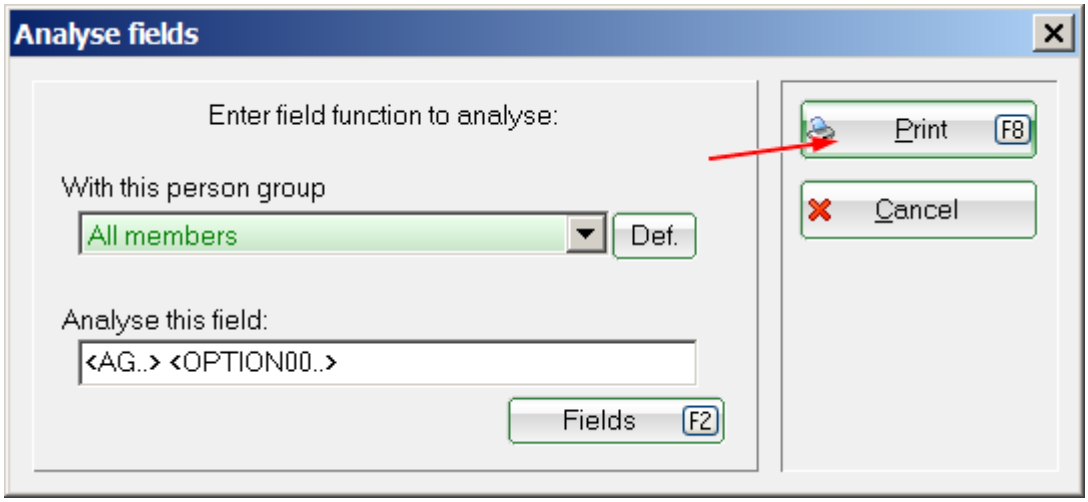

Go to the field selection again:

Here you can also search for fields such as „Gender“:

The persons are counted and you receive the numbers. If both genders occur in a year, 2 lines are printed, lines with zero are omitted!
