

"normal" complex statistics

General stocktaking

With the statistics function of PC CADDIE you can analyse your membership figures in a very complex way.

You can also easily analyse your membership figures for the individual member types or years using „Simple analysis of individual fields“. You can find a description of this here: [Simple evaluation of individual fields](#).

However, you can carry out a well-founded evaluation via **Contacts/Statistics** under the option **'normal' complex statistics** option:

The statistics window will then open, in which you can easily enter the information you want to filter. To create statistics by age, simply enter the following under **Age** enter the different age categories:

Statistics

Define the groups of the statistic:

Title of the statistic:

You must define and name a filter for other separations.

Women and men are always automatically analysed separately for each group.

Please note the cut-off date for entry and exit.

If the statistics are still set from a previous printout, you can create a new statistic using the **New stat.** button to set everything to neutral and clear in one step.

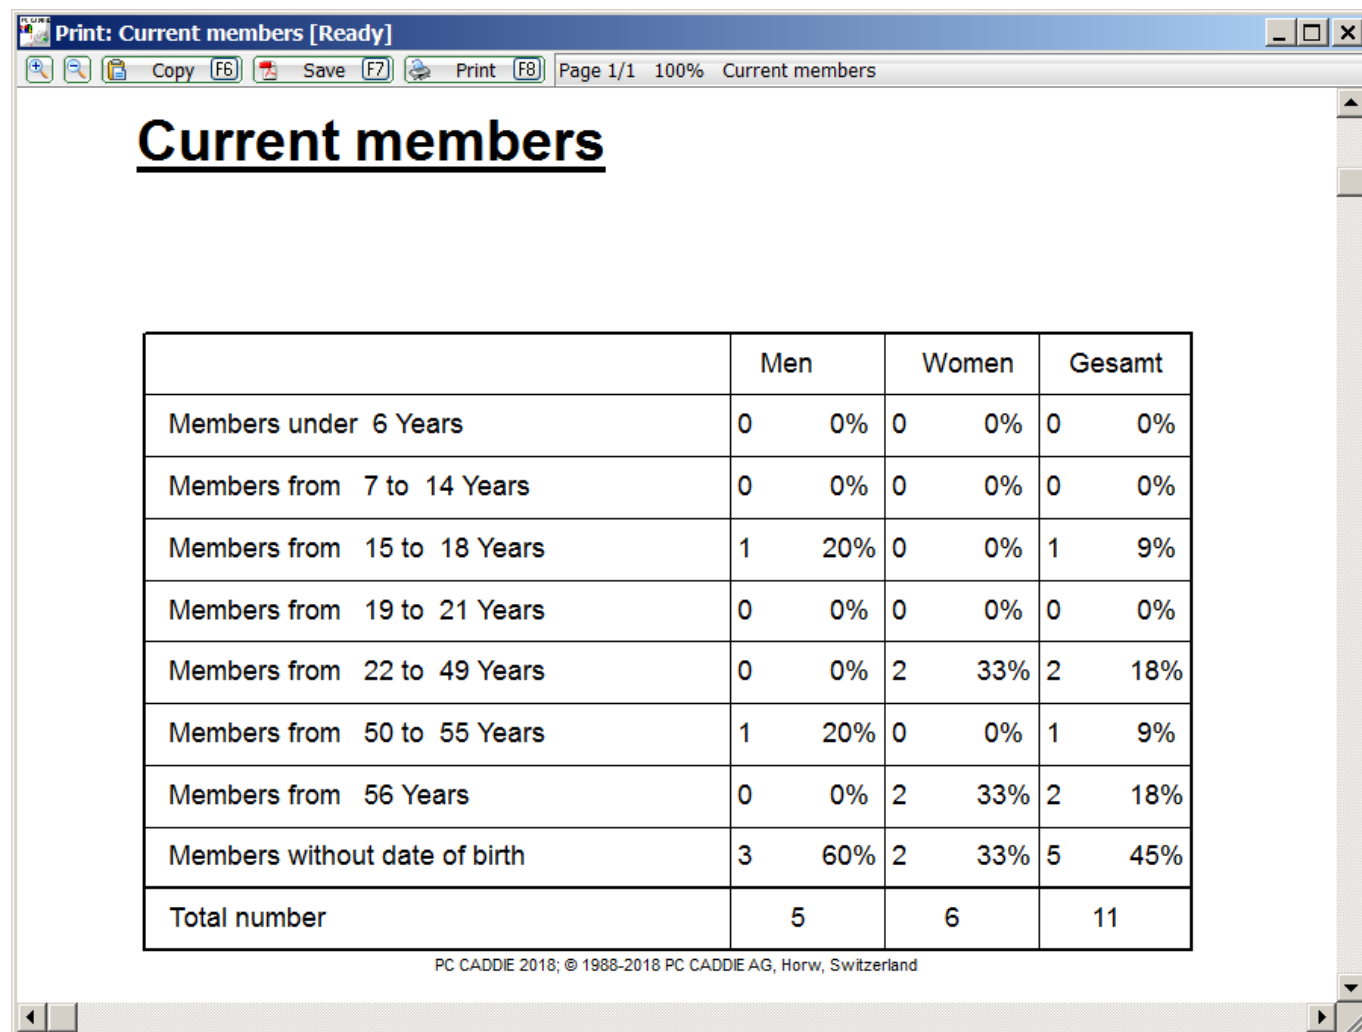

Via the button **Save** button to save your statistics settings; and the next time you use the **Load** button next time. Please bear in mind that the person filters used may have been changed in the meantime. You should always check these before printing.

In order for the statistics to be printed correctly, all restrictions of a row must be fulfilled at the same time. In addition, the filter for all groups must also be fulfilled. If you only want one filter, leave the other one empty (in the drop-down list at the top!). However, two filters give you the practical option of selecting „All members“ for filter 1 and „Juniors“ for filter 2 - you will receive the number of junior members. If you do not wish to limit the age range, leave **age** leave both fields empty. If you put two dashes („-“) in the age fields, people without a date of birth will also be counted. Here are some

examples of the age fields:

from „0“ to „99“	Only persons with dates of birth that result in an age between 0 and 99
from „-“ to „-“	Only persons without date of birth
from „ „ to „6“	Persons up to 6 years of age (<u>always</u> inclusive)
from „-„ to „6“	Persons up to 6 years of age, as well as persons without a date of birth
from „50“ to „ “	Persons aged 50 and over (also inclusive)

Via the button **Print** you will now receive the desired evaluation:

	Men		Women		Gesamt	
Members under 6 Years	0	0%	0	0%	0	0%
Members from 7 to 14 Years	0	0%	0	0%	0	0%
Members from 15 to 18 Years	1	20%	0	0%	1	9%
Members from 19 to 21 Years	0	0%	0	0%	0	0%
Members from 22 to 49 Years	0	0%	2	33%	2	18%
Members from 50 to 55 Years	1	20%	0	0%	1	9%
Members from 56 Years	0	0%	2	33%	2	18%
Members without date of birth	3	60%	2	33%	5	45%
Total number	5		6		11

Quit

The next window opens, in which you can select an existing list layout under Format. You can also create a new list layout using the magnifying glass symbol behind Format:

Statistic List [X]

Select the desired layout for your statistic.

Enter these field to your layout an the group allocation will be printed:

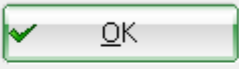

<GROUP> = 1st group allocation
 <GROUPS> = all group allocations
 <FILTER> = Allocation abbreviation

Format: Special 

Order: Alphabet (Names)

☐ Print only if a group matches

☐ Print only if more than one group match

 **OK**

 **Cancel**

In the open editor window, create a new layout with the fields <GRUPPE> and/or <GRUPPEN> fields and save it:

Format editor [X]

Name: Statistics  Define new format

Format type: List Lines: Title: Statistics - <DATE>

2/26 (0) Line Tab

.....10.....20.....30.....40.....50.....60.....70.....

```
<KOPFINFO:FILTER>
<L>|<NAME, FIRSTNAME      >|<GROUPS              >|<FILTER      >
```

 Save format **F11**

 Delete format **F5**

 File **F9**

 Test **F8**

 **Quit**

Then select in the window **Statistics list** window, select the desired options for the list printout and

confirm your selection with **OK**:

Statistic List

Select the desired layout for your statistic.

Enter these field to your layout an the group allocation will be printed:

<GROUP> = 1st group allocation
<GROUPS> = all group allocations
<FILTER> = Allocation abbreviation

Format: Statistics 

Order: Alphabet (Names)

☐ Print only if a group matches

☐ Print only if more than one group match

You receive a list printout in which you can recognise which persons are hidden in your statistics. You can recognise which person is counted in which group and whether people may be counted twice if the filter settings are incorrect. filter settings, people may be counted twice.

Please note that the statistics do not include an archive function. The statistics only ever show the „current status“. If you print out statistics for all active members and then make a correction for a member who is now passive, PC CADDIE will not be able to access the old data the next time it is printed. The member is now counted as passive.
