Update Germany Version 14.1

With PC CADDIE version 14.1 you also download the current DGV licence.
Many changes relating to the DGV specifications run in the background, e.g. the adjustments to the tournament files that are regularly transferred to the DGV. However, this does not change the day-to-day operation in many areas. Nevertheless, there are some new features that we will explain to you here:

MBE association statistics

Tournament lists and Pro

According to the DGV, Pro is only a profession. Therefore, Pro may no longer appear in the HCP field on any lists. Pro will therefore be in brackets after the name on tournament lists in future. An HCPI will appear in the HCPI field if the Pro also has an HCPI lead with the DGV.

Turniername - 17.08.2023

Neue Liste

Einzel - Stableford; 18 Löcher
HCPI®-relevantes Turnier

AA 18 Löcher 2023 — Herren: 43 — Par: 72 — Slope: 131 — Course: 73.2
Damen: 54 — Par: 72 — Slope: 120 — Course: 70.6

Stand: 23.08.23, 14:20 Uhr

	Tee	Zeit	Name, Vorname	Information	Hcp.	
1	1	10:00	Musterfrau, Greta (Pro) Musterfrau, Frieda (Pro) Musterfrau, Erika		 2,7/ 1 15,7/ 15	

PC CADDIE 2023 © 1988-2023 PC CADDIE AG — Golfclub Sonnenschein e.V., Remagen

In this case, Musterfrau Greta is a Proette without HCPI guidance.
Frieda is a proette with HCPI guidance.

Price settings

New window sorting

Here is a new sorting from the PC CADDIE development:

- Under „Group of persons“ you will see the familiar settings such as person filter, handicap, age,

priorities.
- The selection for tees allows you to summarise players who have played individually from a certain tee, for example.

- Special analyses„ - there is a new blind hole function which is explained in detail below.
- Counting method is the familiar function and should only be used in special cases, as it is not possible to publish 2 different counting methods for one player online. This function sets the tee for the selected group of people for the complete tournament calculation.
- Select this tee for players in this category is for setting groups of people for certain tees for the complete calculation of the tees, e.g. all seniors should play from blue. This function has also been available for some time.

Blind Hole

There is a new selection in the tournament base settings ***Prizes*** for Blind Hole:

- NO - no blind hole
- YES - blind hole as known (good if only blind hole scoring, or also for non-HCPI relevant tournaments)
- PRICES - new function - is handled via the price setting, and is highly recommended for HCPI relevant tournaments, as the tournament always remains HCPI relevant, and there can be no problems due to automatic HCPI relevance changes due to the check with the DGV.

Example blind hole prizes

- You can enter the blind hole holes in the basic tournament settings (or directly in the prizes)
- The result is always printed via the price setting (advantage - the blind hole price can be published automatically in addition to individual prices).

- If you have already entered the tees to be scored in the basic tournament settings as above, it is sufficient to enter * (holes according to tournament configuration - is added automatically) in the price that you create manually.
- If you need blind holes with a breakdown of your net classes, for example, create them all manually, in this case by entering the HCP limits in the „Group of people“ button.

Round function tick

As of PC CADDIE version 14.1, this function also affects the price displays on the Internet, including the DGV.

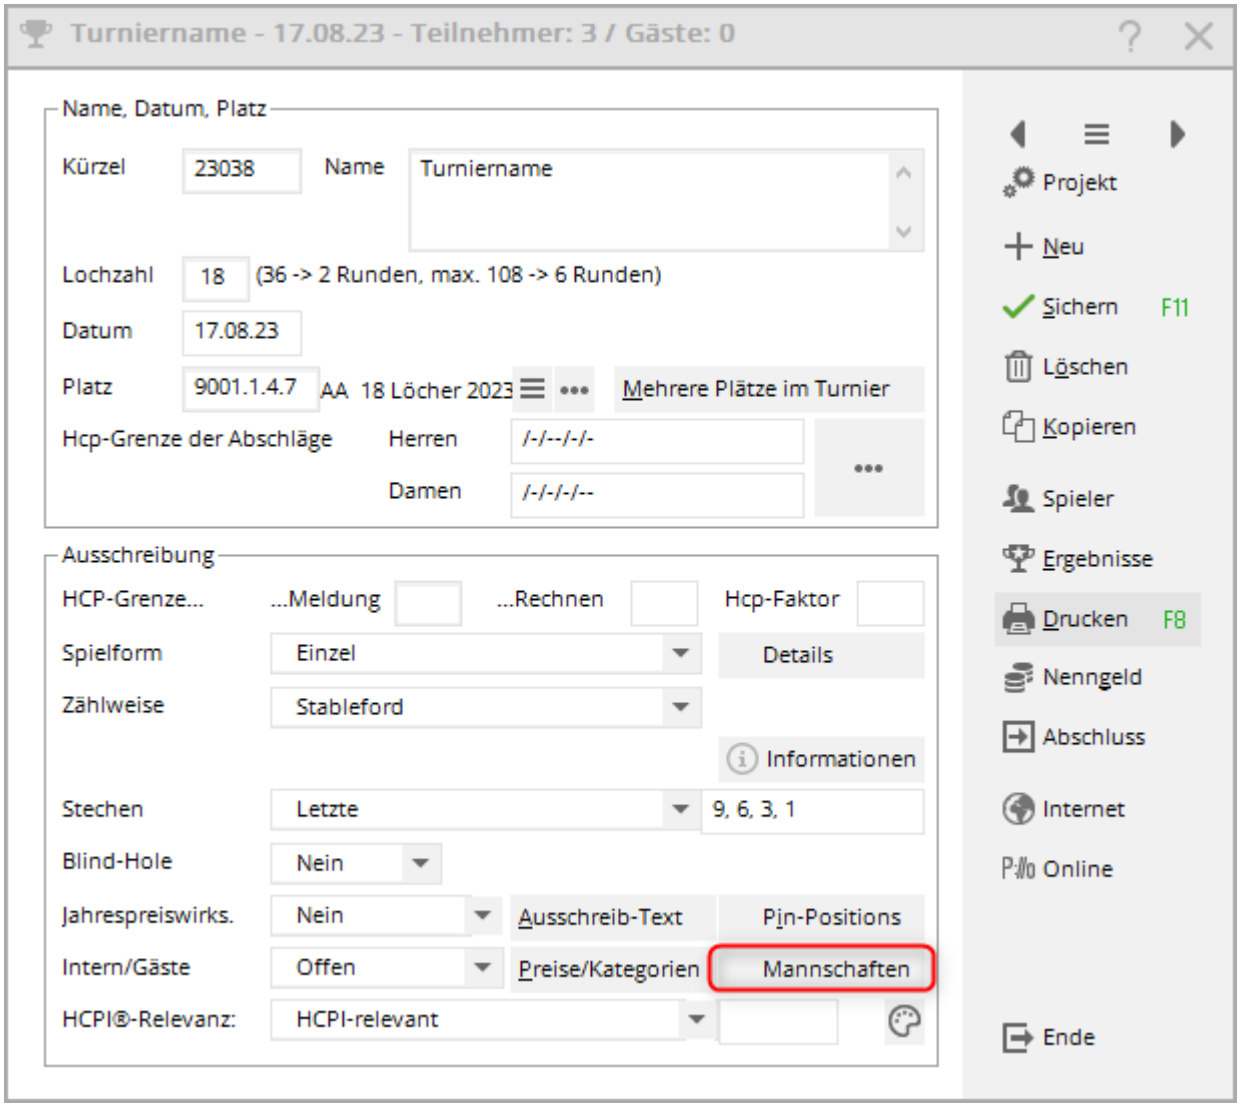

- Only round tick marks that also exist in the tournament are now displayed.

- The function no longer has any effect on whether the prize is printed or not after the round, the prizes that are created are always printed and published.
- New is that ***only the ticked rounds are calculated for the prize***
- New is that the printout and publication of the prize only takes into account the ticked rounds (example club championships with 2 and 3 rounds depending on the group of persons - often men and seniors)

Team scoring becomes team scoring

The DGV has changed other terms, e.g. the team ranking is now called the team ranking.

Inclusive tournaments

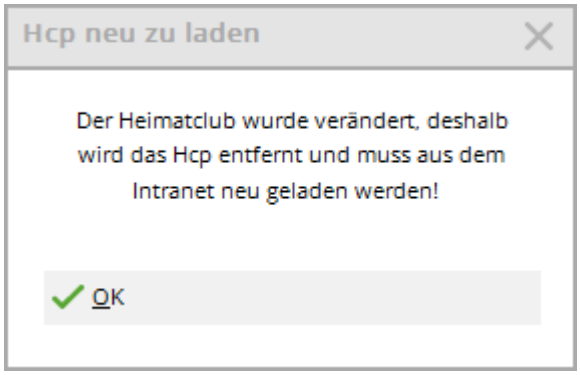

You could already set „inclusive“ in the tournament.
According to the DGV, additional flags will now be transmitted with the tournament rounds to make it easier for players with a disability, for example, to find tournaments on golf.de that they can play in. (Blind, wheelchair golfer, deaf, intellectually impaired, other)

You can either set general INCLUSIVE OR the details for whom the tournament should be available on golf.de.

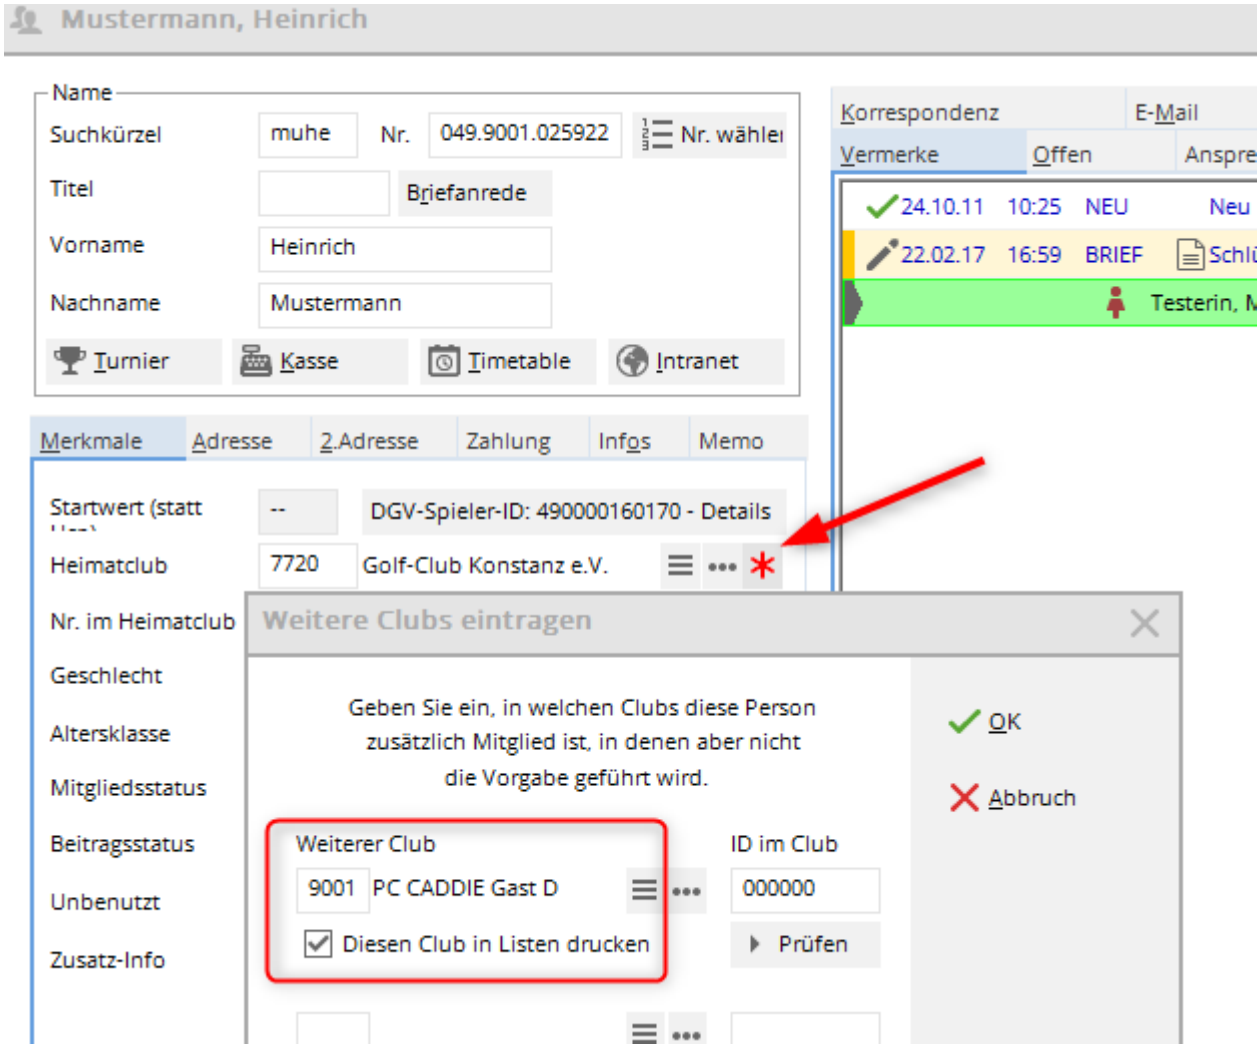

Members, guests and home club

HCPI field is automatically emptied

When you create a new member or change the home club of a guest, the HCPI field is always cleared, as the HCPI must always be queried by the association (DGV Intranet). The DGV wants to prevent outdated HCPIs.

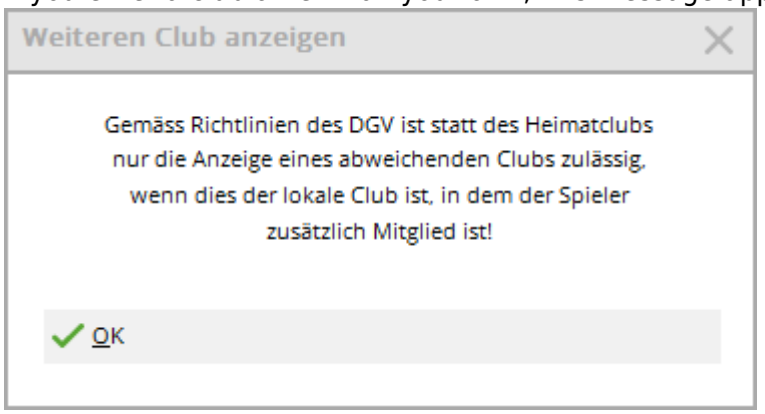

Add more clubs

According to the DGV, the „Print this club in lists“ tick may only be set if the club entered is your own. In the example, the home club of this player is club number 7720, and 9001 is organising a tournament, e.g. with teams.

If you enter a club other than your own, this message appears and the tick cannot be saved:

Load course data from intranet

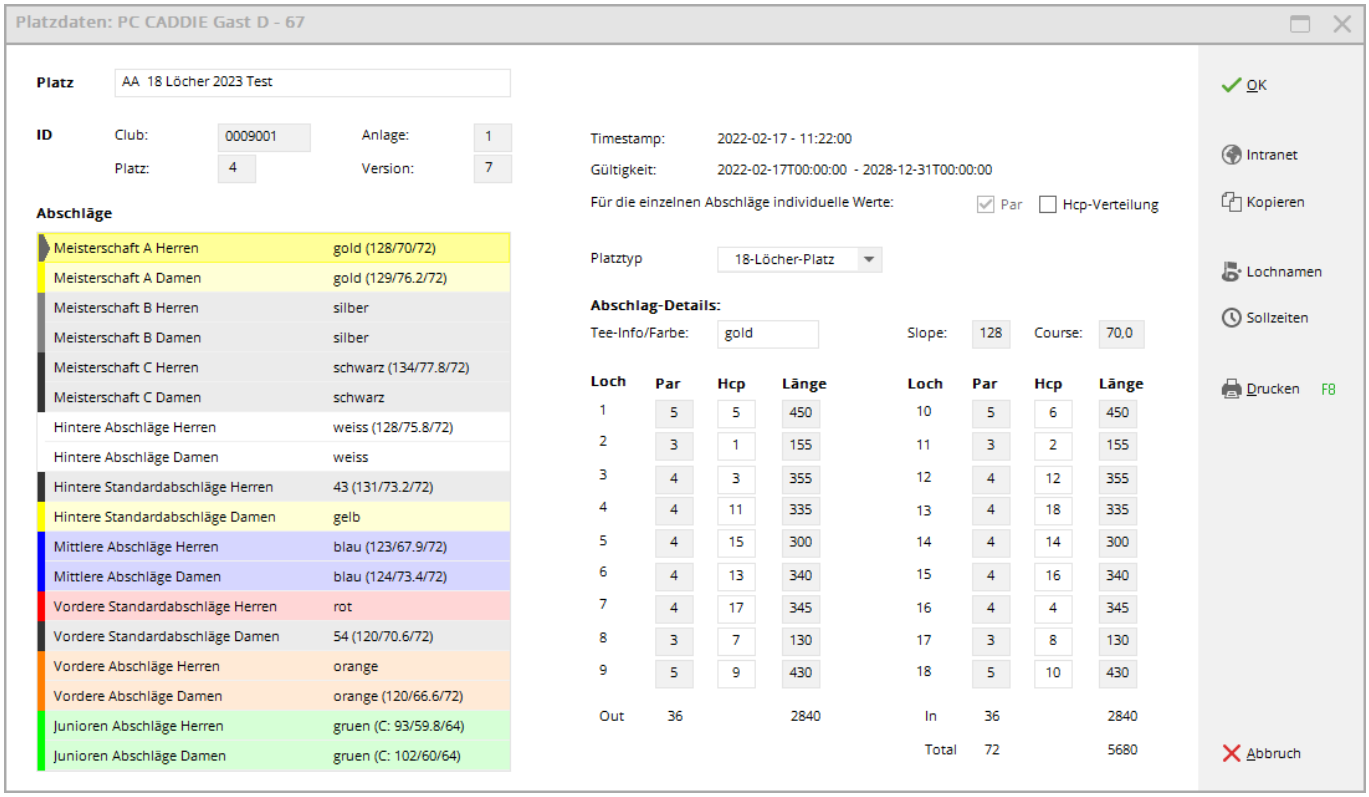

Course data additional colours

According to the DGV, you can now also rename the colours in the course data to „Magenta“, „Cyan“ and „Brown“.
Otherwise, it is still possible to rename the colours and the original colour name must be included, e.g. „Red“ can be renamed to „Dark red“.

Place data - new look

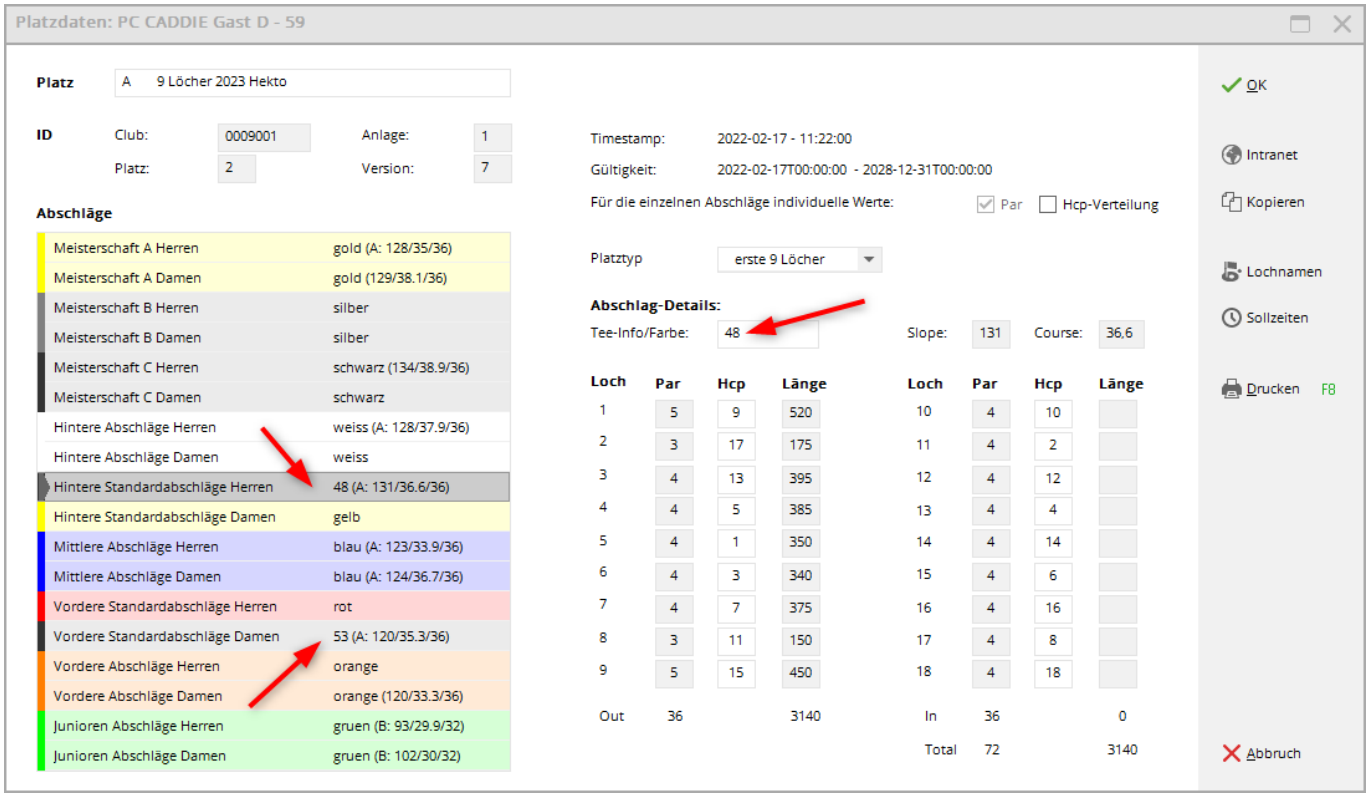

With version 14.1, PC CADDIE provides you with a clearly arranged window for the location data.

With the new look, you can now see the tees on the left and the details of the tees on the right.
The tick for Hcp distribution should only be set if you want to enter different Hcp distributions per tee!

Course data with hectometres

As an alternative to colours, course data with hectometers instead of colours can also be requested from the DGV.
In this case, the tees are displayed in GREY, as well as if the colour is renamed.

Copy tournament

Copying results is no longer permitted according to DGV specifications.
