Catering cash desk

Operation for guests by name

The customer and family-related catering cash register, fully integrated into the PCCADDIE golf software, is only available from us. Because the guests are usually already in the system, the PCCADDIE cash register has a clear value advantage over conventional cash register systems. Even meal allowances, credit deposits and open items are easily accounted for and correctly managed. At the end of the month, you can print out open invoices with all account transactions to the day, send them to the customer or collect them by direct debit. The restaurateur is delighted.

Facts:
