Multi team ranking

This team ranking is always used if several rounds are to be analysed for the teams, especially if these cannot be displayed in a multi-round tournament. It can be used in a multi-round tournament with different forms of play as well as in several individual tournaments.

The basic settings can be found here: Teams.

You can obtain the overall team ranking for several tournaments via the menu ***Tournaments/Multiple tournaments and Golfwochen/Drucken…/Mannschafts-Wertung:***

Click on the button ***Select*** button and mark the desired tournaments with the space bar. With ***Print*** you will receive your overall team evaluation. In the individual tournaments, the teams must be set beforehand and it is important that they are the same teams (team numbers).

You can also use this team ranking for 1 multi-round tournament. The only important thing in a multi-round tournament is that the team ranking is set identically in each round, e.g. „1 string per team“ in round 1 and „1 string per team“ in round 2 via the „Helper“. With the printout via the multi-team ranking you then have the advantage of a clear layout (especially for foursomes and singles). In this case, you can also print the team results directly from the tournament.

TIP You can also use this function to print a results list without entering results and check beforehand check whether your teams are displayed correctly or whether you need to make any additional entries.
