

Turnover statistics

The turnover statistics can be used in all account areas, please select the desired account area. It has many different functions, so it is a good idea to have a specific analysis in mind. Ask yourself the specific question:

What do I want to find out?

You can find the sales statistics via **Turnover/turnover statistics**.

Reset (1)	 Please always press the button before starting the settings. Reset button to restore the basic settings.
	 Reset enables all tests, as you can always reactivate.
Save (3)	Via Save you can easily save particularly practical statistics settings. This means that you always have them quickly to hand and do not always have to make the settings again.  Please stay in the folder that PC CADDIE automatically suggests. Also pay attention to the naming of the statistics, especially the content/topic should be included in the name.
Loading (2)	When you load a saved statistic Load , you only need to enter the period to adjust. This must be changed after loading.

Important settings

Less is often more - only fill in as much as necessary and not as much as possible.

Period and content

You can set the most frequently required settings with the following information:

- **Period:** Always set the relevant period here.
- **Rate time frame daily** This concerns the daily sales at a certain time e.g. 10.00 to 14.00 within the set period e.g. 01.01.10 to 31.12.10
- **until 06:00 on the previous day** This tick is particularly useful for the catering trade if sales after midnight are to be calculated for the previous day.
- **Einzelbuchungen:** Determine whether you want to print with individual bookings or only totals by unchecking the „Individual bookings“ box.
- You can also select other sorting options for the „Individual bookings“ item, e.g. sorted by customer name (alphabetically), item description, invoice number, home club and cash register layout (with debit and credit bookings).
- **Gruppensummen:** Here you can choose between the individual articles or the product groups.
- **Kunden-Filter:** Auch The person group can be selected.
- If you require „individual persons“, please create a filter with enumeration!

- This area can be very useful for green fee analyses. It can be used to determine the fluctuation during certain periods.
- About **Evaluation** you can analyse individual days, weekdays, clubs, person filters or operators.
- The **Displayed value** can be displayed according to „gross-net value“ or „number“.
- For the **time subdivision** shows how often an item was booked in this period, which is very practical when analysing green fees.
- With the **filters** filters can be further differentiated according to groups of people.

Examples of statistics

Please do not forget to save the practical statistics settings customised to your needs. This means you can load the settings again at any time if required.

Account control after contribution allocation

You have allocated the annual contributions and would now like to check them before printing the invoice?

1. Press the button **Reset button**.

2. In the tab **Period** tab, enter the date from... to... tab.
3. The **individual bookings** should be sorted by „Customer name“.
4. Please set the person filter „All persons“, this is the only way you can check whether something has been unintentionally assigned to other persons.
5. You now go to the tab **Filtering** tab and select **Only this person Status:** „to calculate“.
6. Now you can click on **Print** button.

See the result here:

List for individual payment methods

For example, do you need a list of how much turnover you have generated in cash or by EC card for your cash account area?

- Take the route via **Turnover/turnover statistics** and click on the right on **Reset**, to make sure that the basic settings have been restored.
- In the tab **Period and content** tab, enter the desired date for the period and, if required, tick the box for **Print individual bookings** if required.

Then select the tab **Filter:**

Umsatz-Statistik

Zeitraum und Inhalt | **Filterung** | Spezielle Artikel | Tage / Zeit / Club-Statistik

Warengruppen: Wahl

Buchungstext:

- In the „Payment methods“ line, select under **Choice** select the payment method. These can usually be found at the bottom of the article list.
- Make lists for all desired payment types one after the other.
- If you select several payment types at the same time, the totals of the payment types are added together.
- Now start the printout with **Print** (F8).

Turnover by day of the week or with time division

In our example we take the green fee. You can use this description for all articles and product groups, as well as for analyses for your pro shop or your restaurant.

- Select your cash account area, e.g. **SALES** and again take the path **Turnover/turnover statistics**. Reset with **Reset** to restore the default setting.
- In the tab **Period and content** tab under **Period** tab, enter the date.
- Tick the box next to **individual bookings** off.

- Now switch to the tab **Filter tab**. In the line **merchandise category** line, select the product group for GREENFEE. If the product group GREENFEE contains many items, it may not be possible to print them all on the statistics. In this case, please select individual articles. If you all items in the green fee product group, you will see the complete number of green fees for the day of the week in the 1st column.
- Click further on the **Days/Time/Club statistics** and tick the box next to **Print days/time/club statistics**.
- Select **Evaluation** „Days of the week“.
- Set the following for **Displayed value** to „Number“:

The screenshot shows the 'Umsatz-Statistik' window with the 'Tage / Zeit / Club-Statistik' tab selected. The 'Tage / Zeit / Club-Statistik drucken:' checkbox is checked. The 'Auswertung:' dropdown is set to 'Wochentage', 'Angezeigter Wert:' is set to 'Anzahl', and 'Bezogen auf:' is set to 'Artikel'. The 'Zeitintervall:' is set to '02:00' hours. There are five filter slots, all set to '(neutral)'. On the right, there are buttons for 'Drucken F8', 'Reset F5', 'Laden F9', 'Speichern F11', and 'Ende'.

With **Print** you get the following view:

TIP You can reset at any time with **Reset** to restore the basic settings and try out new settings.

Financial accounting export, non-exported bookings

This list is only of interest in connection with the module [Accounting export](#) .

If you use the accounting export module to export your bookings to DATEV, for example, the 2 most common errors are as follows:

1. Posting cannot be exported because the FNA account number is missing in the article.
2. Posting cannot be exported because it was posted to a date in the past and the period has already been transferred to DATEV.

You can use the sales statistics to check whether postings were not exported and which postings they were. In this case, leave the tick next to **Individual postings** in the tab **Period and content tab**. In the tab **Filter** tab for FIBU export:

Note on the indication of value added tax

It is possible that „crooked“ VAT rates (e.g. 8.0 instead of 8.1) are shown on the sales statistics:

PC CADDIE calculates the respective article / product group totals and their net and gross amounts against each other in the sales statistics. This is used to check and overview the totals in the evaluation. Due to rounding differences, especially for small amounts, different percentages may be calculated here. However, the posting and calculation of the tax in the respective sales and individual documents has been posted and shown correctly.

Example 1 - calculated with 20% for the sake of simplicity (this also applies to the respective valid tax

rates of the countries - the currency was deliberately not mentioned in this example):

You sell an item that costs 1.00 gross. At 20% VAT, this corresponds to a net price (rounded down) of 0.83. The tax amount is therefore 0.17. If you now sell this item 100 times in 100 individual receipts, you have a total amount of 83.00 net (100 x 0.83) and 17.00 tax (100 x 0.17). Theoretically, you now owe the tax office 17.00. If you add this back in ONE sum, this would correspond to a percentage of 20.48% (and no longer 20% as correctly shown in the individual receipts). However, as the tax office looks at each voucher individually and not the total of the vouchers, the statement is correct.

Example 2 (group totals):

Item 1 costs 1.00 gross and includes 20% (0.83 net + 0.17 VAT = 1.00 gross) Article 2 costs 1.00 gross and includes 0%, i.e. no VAT (1.00 net = 1.00 gross). You now sell both items 100 times. We remember our first example and know that this corresponds to 83.00 net for the first item. The second item without VAT corresponds to 100.00 net. We now have a net total of 183.00 and a gross total of 200.00. If we add these amounts together, we arrive at a percentage of 9.3%. Of course, you have not sold an item with such a tax rate, but you will quickly realise that this results in a purely mathematical total and mixed tax rates in the sales statistics. If you wish, you can also switch off this feature in PC CADDIE, in which case tax rates will no longer be shown in the sales statistics. Please contact our support team for more information.
