Select account area

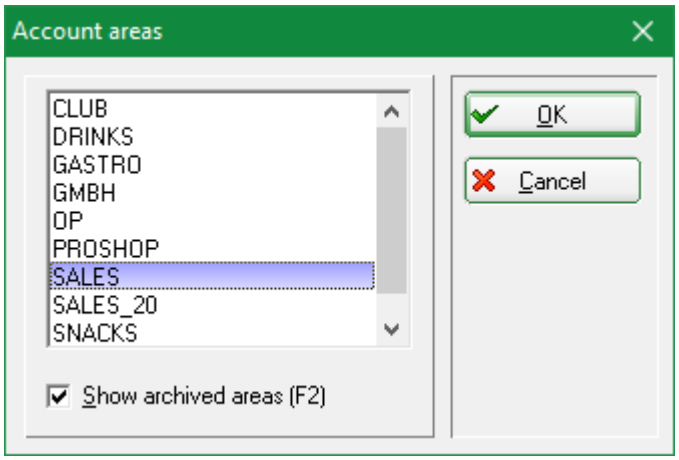

You can change the account area by clicking on ***Select sales/account range*** or by using the key combination CTRL+F2, or by clicking on the yellow button on the PC CADDIE main screen in which an account area is already set.

In the example, we are currently in the account area ***SALES.***

You can now select the desired area here. To be able to select the archive areas, tick the box next to ***Show archive areas*** or click on F2 on your keyboard.

The areas you can see at a station can be set individually: Database paths

Password management can also be used to control who can edit which account areas: Password management
