

# Results notification

Information about the intranet. Where are the results automatically sent to??

Find out =>[here](#)

The function **Competitions/Multiple Tournaments, Golf Weeks/Print.../Results Notification** is in general identical with the function **Competitions/Print.../Results Notification**. Both functions are required only in exceptional cases, usually only for players from countries which are not connected to the intranet.

In addition to the second option, the first one allows you to print the results notifications simultaneously for more tournaments, while the print functionality accessible directly under the menu Competition is used only for a tournament at a time:

The screenshot shows a software dialog box titled "Results notification". It features a "Select competitions (F2)" button above a large empty list box. Below this, there is a "Group of persons" dropdown menu currently set to "All persons", a "Define" button, and a checked checkbox labeled "with foreign home-club". The "Only this club:" section includes an empty text input field and two small icons. There are two checked checkboxes for "Print header" and "Print sender". A text area at the bottom contains the message: "Dear Ladies and Gentlemen, Your club's members obtained the following results on our course (the results within brackets are not handicap effective!);". On the right-hand side of the dialog, there are two buttons: "Print (F8)" with a printer icon and "Quit" with a red X icon.

Use this dialog to set which **Competitions** and which **Group of persons** are to be considered. Furthermore, you can alter the text from the **Information about the results** and decide whether the header and the sender should also be printed. Start the printing process as usually, by pressing the **Print** (F8) button.
