Team scores

The multi-team score is always used when several rounds have to be evaluated for the team competition, both in a multi-round tournament with different game types as well as in several individual tournaments.

More information about the basic settings can be found here: Team scores.

The total team score for both playing forms is accessible under the menu ***Competitions/Multiple Tournaments, Golf Weeks/Print…/Team results:***

Click ***Select*** and use the space-bar to mark the desired tournaments. Press ***Print*** to obtain the total team score. For individual tournaments you have to previously set the team scoring and to maintain the same teams.

You can also use the multi-team scoring for one multi-rounds round-robin tournament. For multiple-round tournaments it is important that the team rating is identical in every round, so if „1 strike per team“ in round 1 then also„1 strike per team“ in round 2. Printing the multi-team scoring give you the advantage of a clearer layout (especially with quad and single). The team results can also be printed directly from the tournament.

HINT: You can use this function to print a result list even without entering the results, which allows you to check beforehand if your team assignment is correct.
