

Aggregate (handicap qualifying)

According to the rules and guidelines, „Four ball aggregate“ can be processed **without handicaps**, because both of the players of a team are starting **in the same flight**. This results in the following process for a tournament that has handicaps and must have an aggregate score at the same time:

The tournament is set as **Aggregate handicap** and the aggregate score is implemented as an individual team score.

This setting is not available for „ready game forms“. The „ready game forms“ are set specially for the Austrian Golf Association and can only be expanded if the Austrian Golf Association needs to make a change.

[Creating new matches](#)

Choosing the format

It is important that you select **Aggregate handicap game form** by aggregate handicap.

You can either select „Ready game forms“ **Individual Stableford stroke play** or **Individual stroke play**, however, you then have to set the start and results lists and score cards accordingly. The individual team score works the same ways as the „Aggregate handicap“ gam form. Only game forms that are supported by the ÖGV (Austrian Golf Association) are set up.

Setting team scores

Process the aggregate score that adds the results of a pair with **Team scoring** and proceed as follows:

Check if the team score module for your PC CADDIE is licensed. Look in the tournament entry mask:

Particularly important: Here, select **Keep teams** and confirm with **OK**.

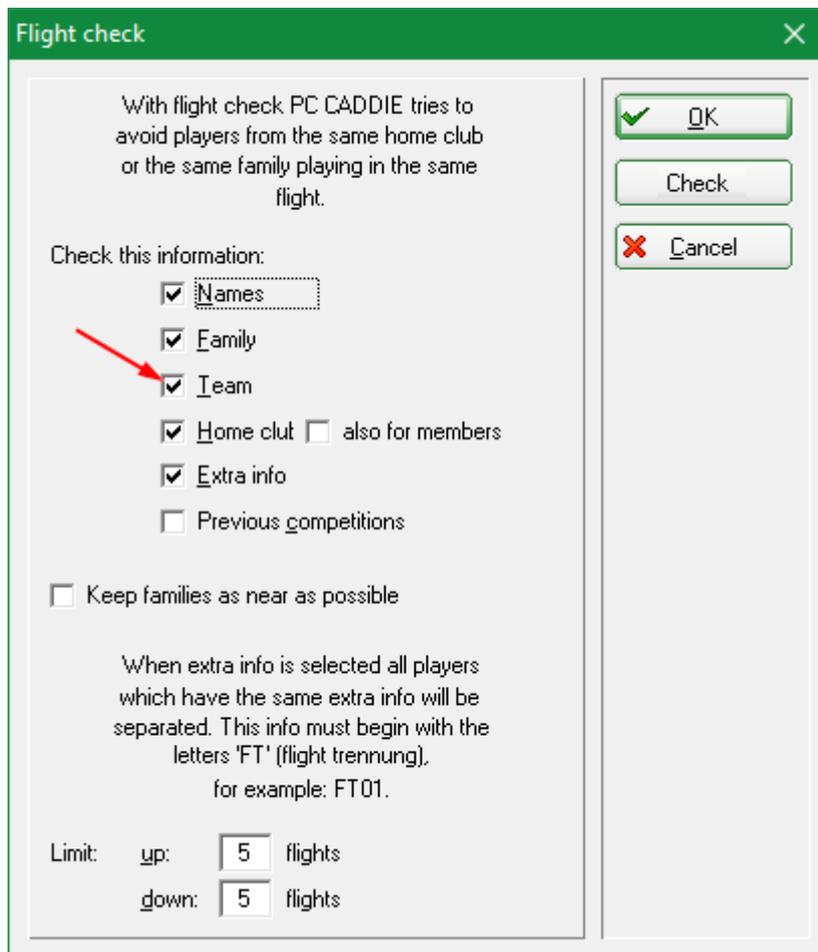

There will be a question that you confirm with **Yes** if you are sure.

Starting list teams with separate games

During the creation of a starting list, the players that are on one team can automatically be separated. Check the **Team** box in the groups' „Flight check“. That way, players who are on one team are assigned different games:

General information on: [Formatting starting lists](#)

Printing starting lists with team names

If you have assigned team names, you can also print them with the starting list. Deposit an individual starting list layout.
